

Notes:

Refer to Table of Offsets for Frames for data to set frame out.

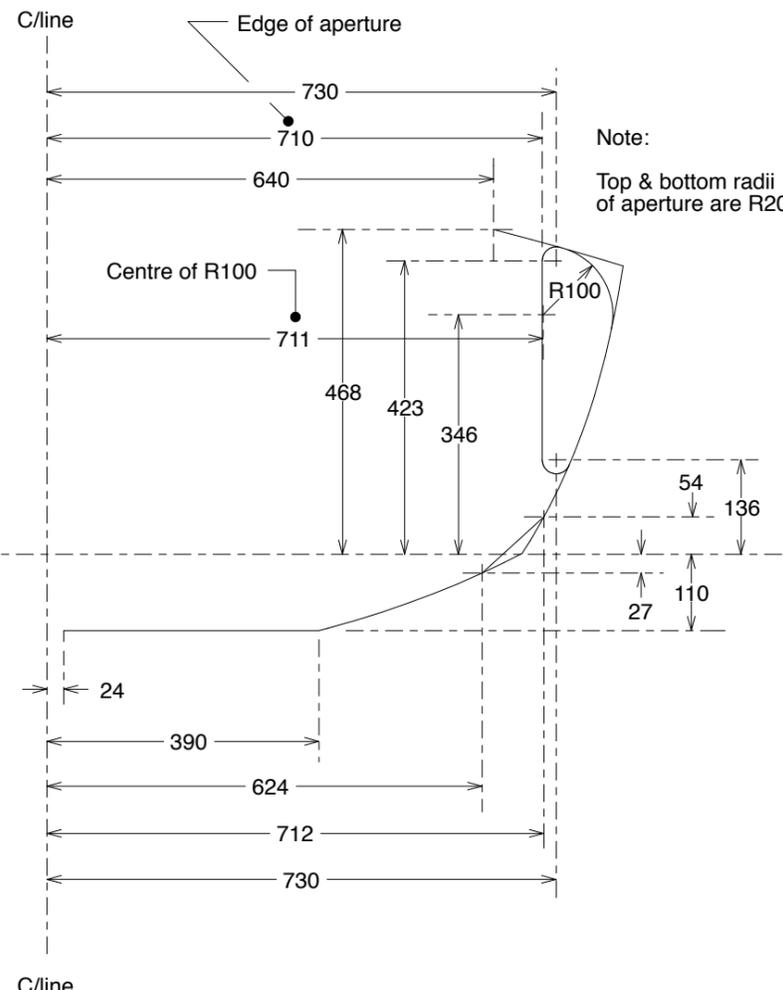

Frame is 18mm sided.

To make frame from three layers of 6mm ply use data for Positions -2244, -2238 & -2232, with a stepped bevel on the outer edges.

To make frame from two layers of 9mm ply, use data for Position -2250 and bevel the outer edges.

To make the frame from solid timber, use data for Position -2250 and bevel the outer edges. See instructions for further notes on solid timber construction.

Offsets for Inner Edge of Frame		
	Offset	Height
Deck		
Inner point	640	468
b 700	700	452
b 800	800	424
Sheer	826	416
Hull		
Sheer	826	416
wl 400	823	400
wl 300	803	300
wl 200	775	200
wl 100	735	100
Chine	681	1
dwl	678	0
b 600	600	-37
b 500	500	-76
b 400	400	-107
Top of Floor	390	-110

Note:
Top & bottom radii of aperture are R20

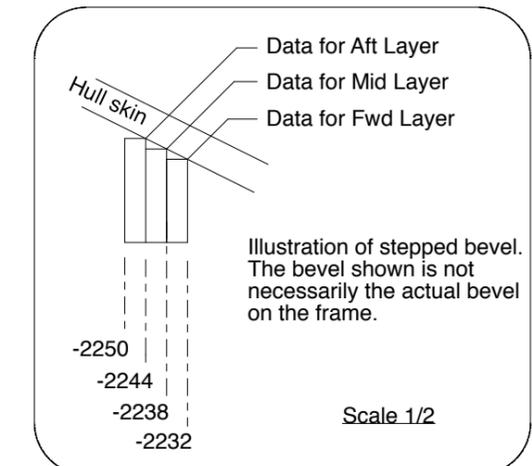

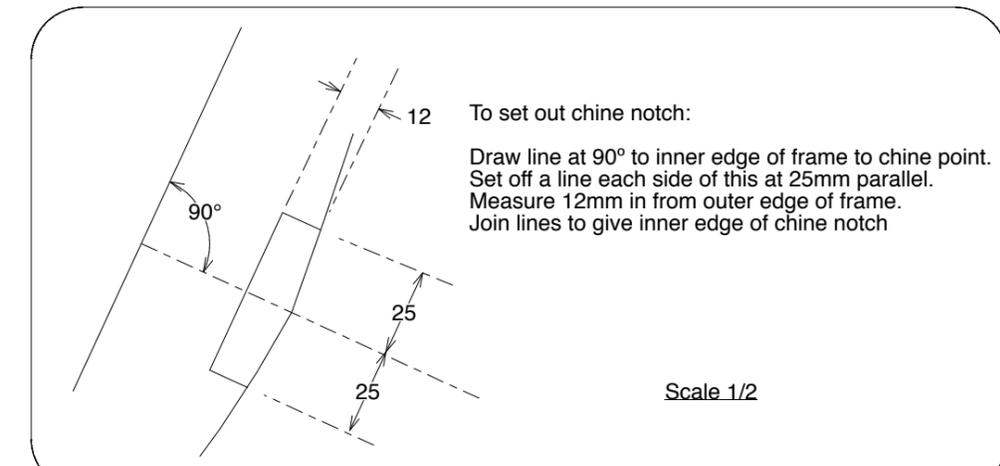

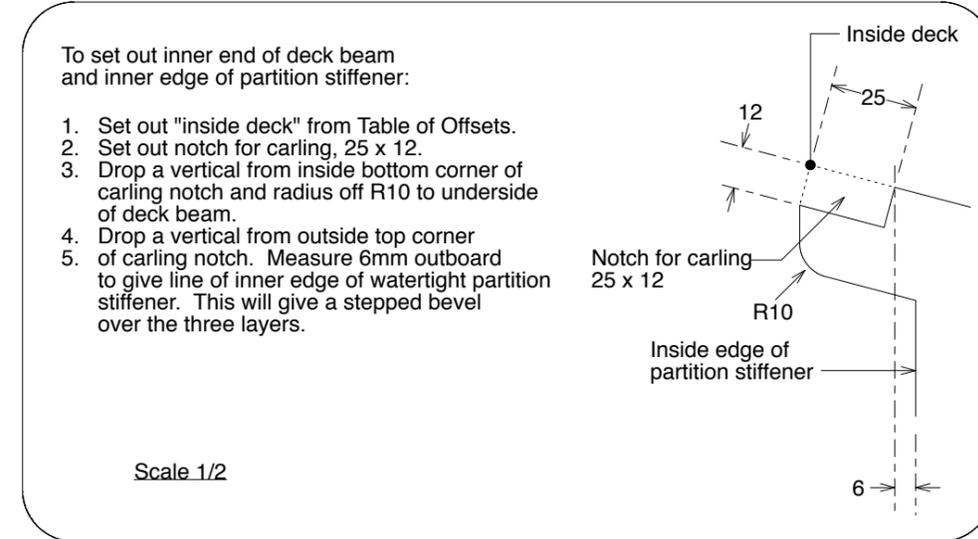

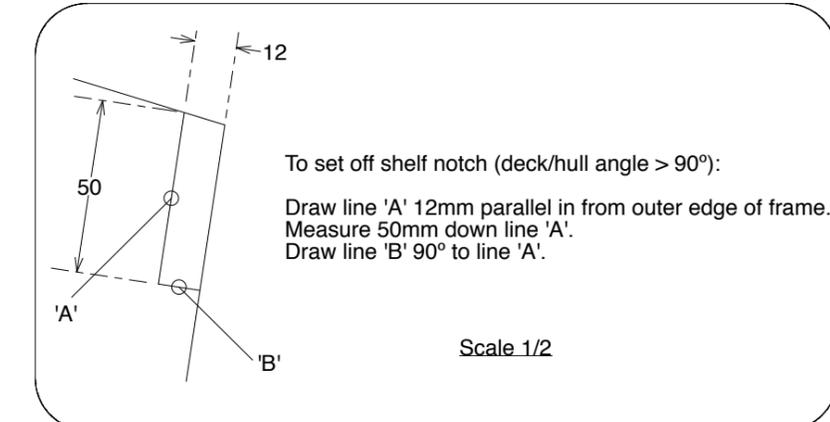

Illustration of stepped bevel. The bevel shown is not necessarily the actual bevel on the frame.

To set out chine notch:
Draw line at 90° to inner edge of frame to chine point. Set off a line each side of this at 25mm parallel. Measure 12mm in from outer edge of frame. Join lines to give inner edge of chine notch

- To set out inner end of deck beam and inner edge of partition stiffener:
1. Set out "inside deck" from Table of Offsets.
 2. Set out notch for carling, 25 x 12.
 3. Drop a vertical from inside bottom corner of carling notch and radius off R10 to underside of deck beam.
 4. Drop a vertical from outside top corner of carling notch. Measure 6mm outboard to give line of inner edge of watertight partition stiffener. This will give a stepped bevel over the three layers.
 - 5.

To set off shelf notch (deck/hull angle > 90°):
Draw line 'A' 12mm parallel in from outer edge of frame. Measure 50mm down line 'A'. Draw line 'B' 90° to line 'A'.
